

Cessna 172 Fuselage simulator project

Flight Path has this 172 fuselage and is looking for students and patrons to help make this into a flight simulator with the added realism of being in an actual airplane.

Cessna 172 Fuselage simulator project

This is an example of a simulator built by another aviation group, and would represent the finished product.

Cessna 172 Fuselage simulator project

Another example of a 172 fuselage built for a simulator.

Cessna 172 Fuselage simulator project

Tom Aardema, retired pilot in Kalamazoo built a flight simulator within a fuselage. Jeff Vos and Bob Stander visited Tom and flew it. The cockpit instruments are essentially replaced by a large monitor with controls from computer simulators. It is very realistic.

All that is needed for Flight Path to build our own version are student and adult volunteers and donations for equipment.
